ASSIGNMENT - 4

Problem Statement :- SMS SPAM Classification

Assignment Date	29 October 2022
Student Name	S.DHARSAN
Student Reg Number	737819ECR031
Maximum Marks	2 Marks

1. Download the Data set: - Data set

https://www.kaggle.com/code/kredy10/simple-lstm-for-text-classification/data

2. Import required library

Import the necessary libraries

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
from sklearn.model_selection import train_test_split
from sklearn.preprocessing import LabelEncoder
from keras.models import Model
from keras.layers import LSTM, Activation, Dense, Dropout, Input, Embedding
from keras.optimizers import RMSprop
from keras.preprocessing.text import Tokenizer
from keras.preprocessing import sequence
from keras.utils import to_categorical
from keras.callbacks import EarlyStopping
%matplotlib inline
```

3. Read dataset and do pre-processing

Preprocessing:

```
In [17]:

from tensorflow.keras.preprocessing.sequence import pad_sequences
from tensorflow.keras.models import Sequential
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Entending
from tensorflow.keras.layers import Embedding
from tensorflow.keras.layers import Dense
f
```

4. Create Model

WordClouds

WordCloud: Ham messages

In [10]:

show_wordcloud(data_ham, "Ham messages")

WordCloud: Spam messages

In [11]:

show_wordcloud(data_spam, "Spam messages")

5. Add Layers (LSTM, Dense-(Hidden Layers), Output)

6. Compile the Mode

```
In [19]:   
# pad documents to a max length of 4 words
           max_length = 8
           padded_train = pad_sequences(encoded_train, maxlen=max_length, padding='post')
            padded_test = pad_sequences(encoded_test, maxlen=max_length, padding='post')
           print(padded_train)
          [[ 322 10 53 ... 30 349 1990]
[1992 2558 21 ... 203 1025 225]
[ 83 1443 4 ... 2 3794 3795]
           [1477 30 2063 ... 239 30 2064]
[763 1679 1161 ... 0 0 0]
[8 155 20 ... 8 290 175]]
   In [20]: # define the model
               model = Sequential()
               model.add(Embedding(vocab_size, 24, input_length=max_length))
               model.add(Flatten())
model.add(Dense(500, activation='relu'))
model.add(Dense(200, activation='relu'))
                model.add(Dropout(0.5))
                model.add(Dense(100, activation='relu'))
                model.add(Dense(1, activation='sigmoid'))
                # compile the model
                model.compile(optimizer='rmsprop', loss='binary_crossentropy', metrics=['accuracy'])
               # summarize the model
               print(model.summary())
```

Model: "sequential_1"

Layer (type)	Output	Shape	Param #
embedding_1 (Embedding)	(None,	8, 24)	190920
flatten_1 (Flatten)	(None,	192)	0
dense_2 (Dense)	(None,	500)	96500
dense_3 (Dense)	(None,	200)	100200
dropout (Dropout)	(None,	200)	0
dense_4 (Dense)	(None,	100)	20100
dense_5 (Dense)	(None,	1)	101
Total params: 407,821 Trainable params: 407,821 Non-trainable params: 0			
Non-trainable params: 0			

7. Fit the Model

```
early_stop = EarlyStopping(monitor='val_loss', mode='min', verbose=1, patience=10)
model.fit(x=padded_train,
         y=y_train,
         validation_data=(padded_test, y_test), verbose=1,
         callbacks=[early_stop]
Epoch 1/50
                 Epoch 2/50
140/140 [====
                  ========] - 0s 3ms/step - loss: 0.0447 - accuracy: 0.9865 - val_loss: 0.0840 - val_accuracy: 0.9821

```

8. Save The Model

```
MARNING:tensorflow:From /Users/mac/opt/anaconda3/envs/deeplearning/lib/python3.7/site-packages/tensorflow/python/training/tracking.py:111: Mo del.state_updates (from tensorflow.python.keras.engine.training) is deprecated and will be removed in a future version.

Instructions for updating:
This property should not be used in Tensorflow 2.0, as updates are applied automatically.

WARNING:tensorflow:From /Users/mac/opt/anaconda3/envs/deeplearning/lib/python3.7/site-packages/tensorflow/python/training/tracking.py:111: La yer.updates (from tensorflow.python.keras.engine.base_layer) is deprecated and will be removed in a future version.

Instructions for updating:
This property should not be used in Tensorflow 2.0, as updates are applied automatically.

INFO:tensorflow:Assets written to: spam_model/assets

In [30]: with open('spam_model/tokenizer.pkl', 'wb') as output:
    pickle.dump(t, output, pickle.HIGHEST_PROTOCOL)
```

9. Test The Model

```
In [31]:
          s model = tf.keras.models.load model("spam model")
          with open('spam_model/tokenizer.pkl', 'rb') as input:
              tokener = pickle.load(input)
          # s model.summary()
In [38]:
          sms spam = ["We know someone who you know that fancies you. Call 09058097218 to find out who, POBox 6, LS15HB"]
          sms_ham = ["I'll text Tanya when I get home, hang on"]
          sms_proc = tokener.texts_to_sequences(sms_ham)
          sms proc = pad sequences(sms proc, maxlen=max length, padding='post')
          pred = (model.predict(sms_proc) > 0.5).astype("int32").item()
          pred
In [39]:
          pred = (model.predict(sms_proc) > 0.5).astype("int32").item()
          pred
Out[39]: 0
In [33]:
          X_test[5]
Out[33]: "I'll text carlos and let you know, hang on"
```
